Graphic Design Intern

PROJECTS

- Road Perception And Safety System For Autonomous Vehicle**
This project implements Safe zone, Traffic sign detection in road.
 - Developed a vision-based lane detection system using an encoder-decoder convolutional neural network for accurate lane-boundary segmentation.
- Build your own user-level file system**
This project implements a minimal kernel-level file system and integrates it with a user-space web-based UI
 - This system allows project explores the design and development of a custom kernel-level file system that can be controlled via a user-friendly web-based interface.
